At Olin

We define engineering broadly, from understanding people and their needs, to designing solutions, and extending to the delivery of new technologies and services to people and society. Do you get excited about all aspects of engineering, from the people to the underlying science to the product? We do. Collaborate with us to create a vision and strategy for engineering education at Olin, and beyond.

We’re re-thinking

Realizing positive change in the world requires thinking big and taking risks. Olin’s graduates are recognized for their creativity, initiative, and ability to make a difference, and Olin collaborates with other institutions and individuals around the world to change engineering education. But we know that we can do better, and we’re committed to continually questioning and improving our approaches. There are no departments at Olin; you will work with students, staff, and faculty from all disciplines to realize learning opportunities for all.

Engineering education

We are excited about co-teaching in an experiential, interdisciplinary, student-centric learning environment. We enjoy fun, irreverent creative acts. We appreciate, follow, debate, and contribute to educational theory as much as engineering practice. And we stretch ourselves to work and teach outside our comfort zones.

We are seeking enthusiastic applicants for full or part-time faculty positions at any rank. If you hold an upper-level degree in engineering or a related field, or you have a passion for the way your field connects to engineering, or you have substantial experience relevant to Olin’s mission, and you are interested in preparing engineering innovators and creating change in engineering education by joining our faculty, we’d love to hear from you.
