At Olin

We define engineering broadly, from understanding people and their needs, to designing solutions and delivering new technologies and services to people and society. Do you get excited about all aspects of engineering, from the people to the underlying mathematics and science to the product? We do. Collaborate with us to create a vision and strategy for engineering education at Olin, and beyond.

We’re re-thinking

Realizing positive change in the world requires thinking big and taking risks. Olin’s graduates are recognized for their creativity, initiative, and ability to make a difference, and Olin collaborates with other institutions and individuals around the world to change engineering education. But we know we can do better, and we’re committed to continually questioning and improving our approaches. There are no departments at Olin; you will work with students, staff, and faculty from all disciplines to realize learning opportunities for all.

Engineering education

We are excited about co-teaching in an experiential, interdisciplinary, student-centric learning environment. We enjoy fun, irreverent, creative acts. We appreciate, follow, debate, and contribute to educational theory as much as to engineering practice. And we stretch ourselves to work and teach outside our comfort zones. As we work to change engineering education, we are expanding our faculty team. We seek enthusiastic applicants for full- or part-time faculty positions at any rank. If you hold an upper-level degree or have substantial experience relevant to Olin’s mission, are interested in developing engineering innovators, and want to drive change in engineering education, we’d love to hear from you.
