At Olin

We believe that engineers must build. It is only through the translation of engineering knowledge and theory to real-world products and practices that we can create positive change in the world. We are a community of practical dreamers. At Olin, you will work side-by-side with students and faculty across disciplines to teach the skills to make ideas real.

We build

We cut, join, weld, mill, turn, print, sew, sketch, shape and form...to learn. Every Olin student, regardless of major, takes multiple courses in which they take ideas from concept to physical form. Come help us to design the perfect intersection of learning and making, to put the creative act in context, and to develop talented students capable of improving the world by making their ideas real.

to learn

The creative act should shape the mind as much as it shapes matter. We are excited about collaborating across disciplinary boundaries, creating compelling learning experiences, and training our students to be creators - the makers of change and culture.

We are seeking applicants for a full-time faculty or staff position to join us in preparing engineering innovators and creating change in engineering education. If you have relevant experience, and you understand the importance of empowering students to learn to create through experience, exploration, and sometimes failure, we want to hear from you.
